

## Highly Automated Testing for Maximum Quality & Speed.

- ✓ **Autonomous execution, evaluation and management** of whole testsuits
- ✓ **Smallest possible manual effort:** only minimal manual configuration needed
- ✓ **Optimized load factor** due to autonomous distribution of tasks for test benches

Thanks to the **customer optimized interface**, the configuration of testsuits and the managing and monitoring of testresults is an easy task. **No expert knowledge is needed!**

### Easy to Use

The user interface **FATIS – Control Tool (FATIS-CT)** allows the start and configuration of testsuits without directly accessing test benches. The graphical interface can be **customized to meet the requirements of your particular projects**. Thereby FATIS is **easy to use** – even for employees with low experience in testing purposes.

### Time Saving

FATIS autonomously manages necessary configuration steps for every single test platform and copies test results from every single test platform to the configured destination folder – **no manual actions are needed**. FATIS accelerates the test execution and **minimizes the risk for errors** compared to manual testing.

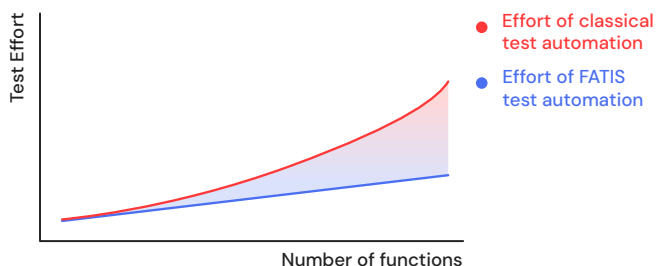

Figure 1: Effort of FATIS and classical test automation

### Scalable

No matter if 10 or 100 test benches – the scalability of FATIS guarantees the **best possible load factor for your test resources**. FATIS distributes the test tasks to all available test benches, to execute all testsuits as fast as possible. Even with an increased number of test benches there is **no additional effort for users**.

### Transparent

FATIS provides the **monitoring of test states and test results, independent from access to test benches** – due to the consequent connection to JIRA.

S	Priorität ↓	Fällig	Status	Testfeld
1	🔴	05/Aug./22	ON HOLD	E2E - Test - V1.35
2	🔴	22/Juni/22	TODO	Signal-Monitoring - V1.35
3	🔴	15/Juni/22	IN ARBEIT	Kurztest - V1.35
4	🔴	13/Juli/22	TODO	E2E - Test - V1.34
5	🔴	13/Juli/22	ANALYSE OFFEN	Kurztest - V1.34

Figure 2: Screenshot Jira

This enables the user to **access test states and test results at any time and place**. For detailed test results JIRA also provides links to every test result in the corresponding ticket.
